The home screen is mostly an interactive map like the google maps application. The user can zoom in and out, click on a marker for a MARKER Preview. We wanted to keep the app simple and focused, so there are only 2 buttons: MENU and MARKER LIST

This is the icon to expand the MENU.

Search feature will implement googles SDK for maps.

Tapping this takes the user to the MARKER LIST. This is a textual representation of the markers on the map.
